

InterCoFlow

INTERCOMPANY SYNC FOR SAP BUSINESS ONE GROUPS

A group of B1 companies, kept in step.

Group companies hold the same items, customers and accounts under different codes, and keeping them aligned is a weekly re-keying job. InterCoFlow lets you draw how master data should flow between your SAP Business One companies, preview every change, and replicate it with a full audit trail. It is in development.

THE PROBLEM

Sound familiar?

The same item has three codes in three companies.

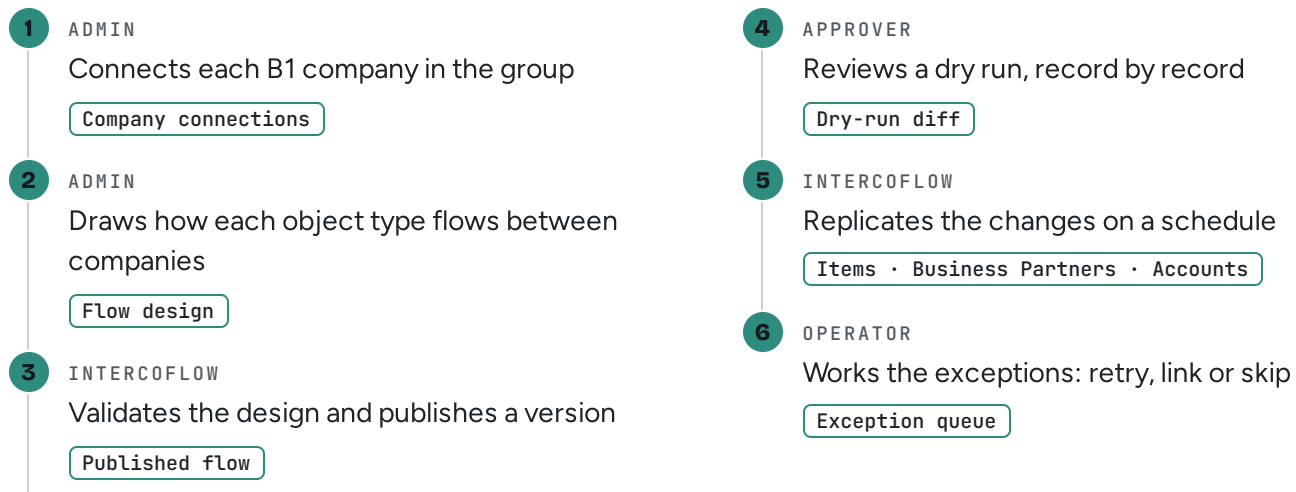

Exchange rates and GL accounts drift apart between entities.

A new customer is set up in one company and forgotten in the others.

Nobody can say who changed what, where, and when.

HOW IT WORKS

Step by step, inside SAP Business One

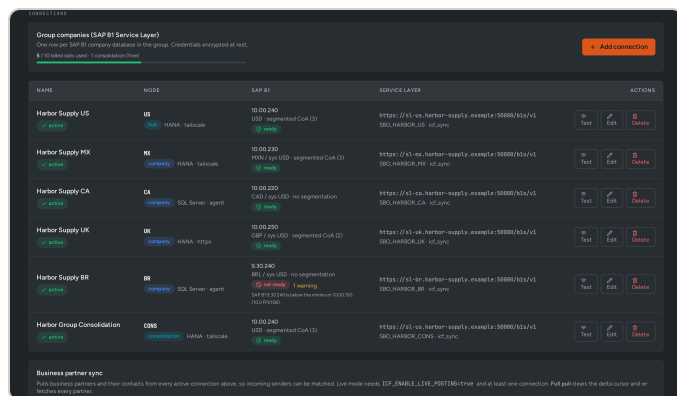

WHAT YOU GET

Built for B1, not bolted on

- ✓ Visual flow designer per object type
- ✓ Dry-run preview before anything is written
- ✓ Items, business partners, GL accounts, warehouses, BOMs and exchange rates
- ✓ An audit entry for every write, with loop prevention
- ✓ Approvals and an exceptions queue

INSIDE INTERCOWFLOW

NAME	NODE	SAP B1	SERVICE LAYER	ACTIONS
Harbor Supply US	US	10.00.240 USD - segmented CUA (S)	https://s1-us.harbor-supply.example.com/10000/111/v1 SBO_HARBOR_US_v1.json	Test Edit Delete

WHY CSC-WORK

Consultancy work that kept repeating became product. Every Flow product runs on the same foundation — shared licensing, the same SAP Business One Service Layer client, the same design system — so they install alongside each other and share data instead of fighting over it.

Built and supported by SAP Business One developers and consultants, on HANA and SQL Server.

Shape it with us — join the pilot

We are building it with a small group of early customers.
