

RentalFlow

EQUIPMENT AND ASSET RENTAL FOR SAP BUSINESS ONE

Rent it out, get it back, **bill it right.**

RentalFlow is our equipment and asset rental product for SAP Business One. It is being shaped now with a small group of early customers — the foundation (SAP connection, locations, users) is running, and the rental workflow below is what we are building with them.

THE PROBLEM

Sound familiar?

Availability lives in a calendar that does not know what is out on site.

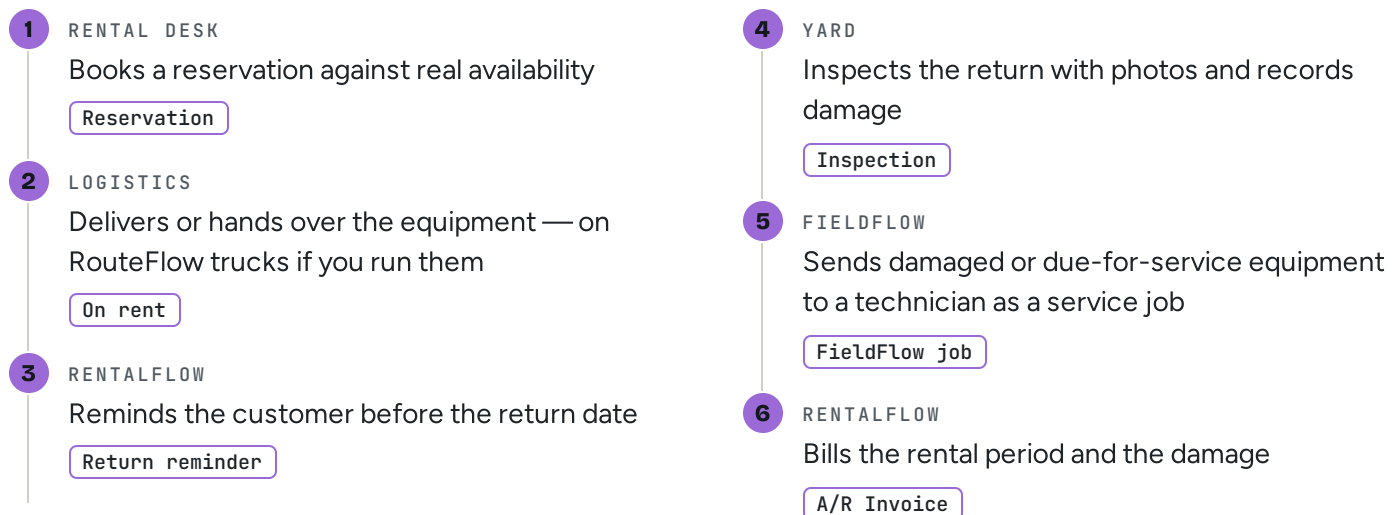

Rental invoices are built by hand from contracts and delivery notes.

Equipment comes back damaged and nobody can prove when it happened.

Depreciation in finance stops agreeing with the fleet on the yard.

HOW IT WORKS

Step by step, inside SAP Business One

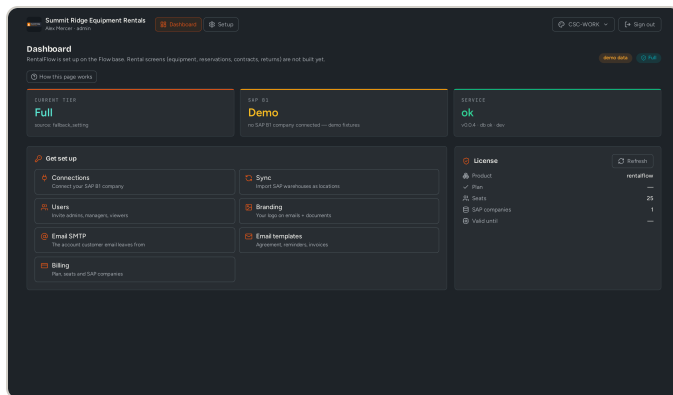

WHAT YOU GET

Built for B1, not bolted on

- ✓ Locations imported from your B1 warehouses
- ✓ Reservations against real availability (in development)
- ✓ Check-out and return, with reminders (in development)
- ✓ Return inspections with photos (in development)
- ✓ Rental billing into B1 (in development)
- ✓ Works with FieldFlow: repairs and preventive maintenance of the rental fleet run as FieldFlow jobs

INSIDE RENTALFLOW

Dashboard and getting started

WHO USES IT

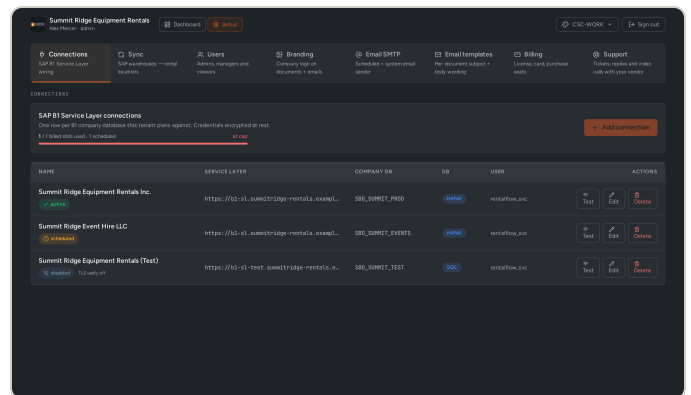

Rental desk

Yard and logistics

Finance

WHO IT FITS

Equipment and tool rental companies, heavy equipment rental, and anyone renting assets out of a B1 company.

SAP Business One connections, one per company

Screens shown with demo data from fictional companies. Some screens show features still in development.

THE BUSINESS CASE

EXTRA REVENUE / YR

\$651,525

300 assets, 55% → 62% utilization

Illustrative example from the calculator on the product page, with its default inputs. Put in your own numbers there.

WHY CSC-WORK

Consultancy work that kept repeating became product. Every Flow product runs on the same foundation — shared licensing, the same SAP Business One Service Layer client, the same design system — so they install alongside each other and share data instead of fighting over it.

Built and supported by SAP Business One developers and consultants, on HANA and SQL Server.

Shape it with us — join the pilot

We are building it with a small group of early customers.
