

StockFlow

MOBILE-FIRST WAREHOUSE MANAGEMENT FOR SAP BUSINESS ONE

Real warehouse discipline, from any phone.

StockFlow runs your warehouse floor from handhelds and phones — receive, put away, pick, pack and count, with every scan checked against the bin. It is in pilot today, running the floor on its own stock records; live posting to SAP Business One documents is the next release.

THE PROBLEM

Sound familiar?

Stock in B1 says one thing and the shelf says another.

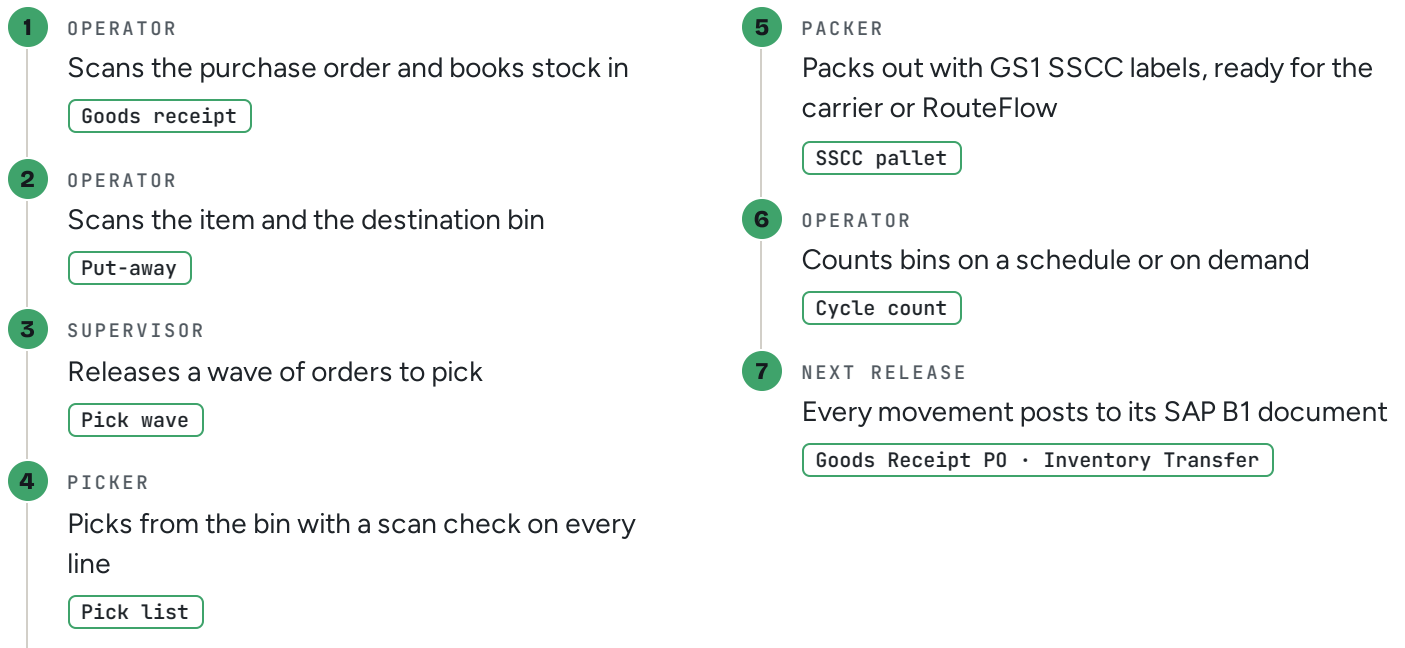

Rugged scanners are expensive, so half the team works from paper.

Pickers walk the warehouse looking for the bin, and pick the wrong item.

Cycle counts happen once a year, during the audit.

HOW IT WORKS

Step by step, inside SAP Business One

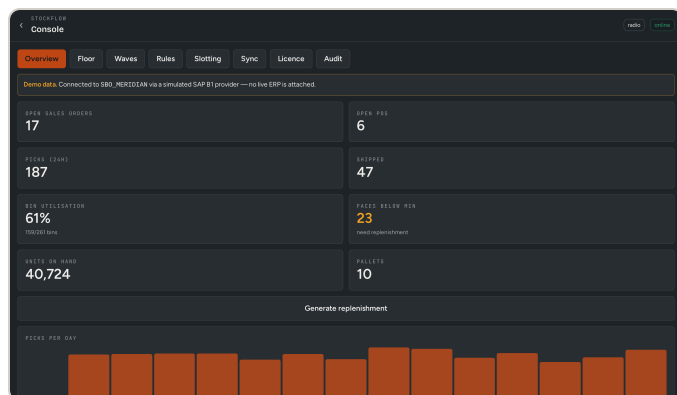

WHAT YOU GET

Built for B1, not bolted on

- ✓ Barcode scanning from any phone camera — no rugged hardware required
- ✓ Bins, license plates (LPN) and GS1 SSCC pack-out
- ✓ Directed put-away, wave picking and replenishment
- ✓ Cycle and directed counts; counts and put-away work offline
- ✓ Badge sign-in and push-to-talk for the floor
- ✓ Order-to-cash view across StockFlow, RouteFlow and CollectFlow

INSIDE STOCKFLOW

The supervisor console

Screens shown with demo data from fictional companies.

THE BUSINESS CASE

INVENTORY ACCURACY

99.3%

from 92.4

Typical improvement targets we design a rollout to move — not a guarantee or a quoted customer result.

WHO USES IT

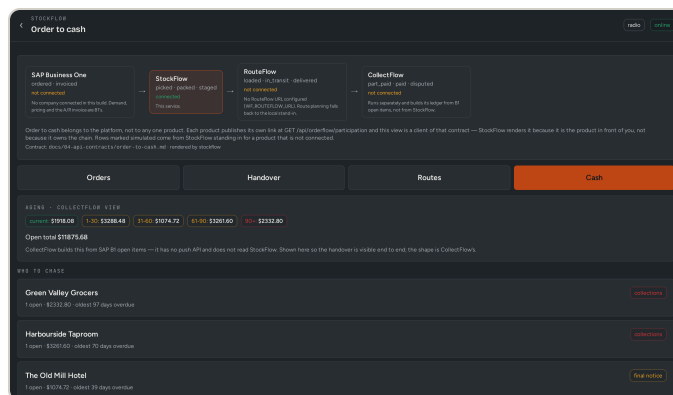

Warehouse operators

Supervisors

Inventory controllers

WHO IT FITS

Distributors, food and beverage (batch-tracked), manufacturers issuing to production, and importers receiving containers.

Order-to-cash across StockFlow, RouteFlow and CollectFlow

WHY CSC - WORK

Consultancy work that kept repeating became product. Every Flow product runs on the same foundation — shared licensing, the same SAP Business One Service Layer client, the same design system — so they install alongside each other and share data instead of fighting over it.

Built and supported by SAP Business One developers and consultants, on HANA and SQL Server.

See StockFlow on your own data

Thirty minutes, your process, your questions.
